## DETAILED ACTION

## Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group 1 claim(s) 1-79 82-100, and 144 drawn to methods of making a cell profile comprising response to an agent using cells on a support

Group 2 claim(s) 80, 81, 101, and 102 drawn to a method of correlating the effect of an unknown foreign agent on a cell to profiles of the effect of known foreign agents on cells and apparatus therefor.

Group 3 claim(s) 103-120, drawn to supports for cells.

Group 4, claim(s) 121-124 drawn to a method of making cells on a support

Group 5 claim(s) 125-127 drawn to an apparatus for making cells on a support.

Group 6 claim(s) 128-143, drawn to methods of making and using digital cells, and apparatus therefor.

The inventions listed as Groups 1-6 do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Rule 13.2 states:

Application/Control Number: 10/562,469 Page 3

Art Unit: 1631

13.2 Circumstances in Which the Requirement of Unity of Invention Is to Be Considered Fulfilled
Where a group of inventions is claimed in one and the same international application, the requirement of unity of
invention referred to in Rule 13.1 shall be fulfilled only when there is a technical relationship among those
inventions involving one or more of the same or corresponding special technical features. The expression "special

technical features" shall mean those technical features that define a contribution which each of the claimed

inventions, considered as a whole, makes over the prior art.

The claimed subject matter does not comprise a technical feature that defines a contribution over the prior art. The technical feature of the claimed subject matter is a cell profile. The technical features is shown in WO 98/06874 (Regents of the University of California). WO 98/06874 shows cell profiles of cells on a matrix support on pages 4-6.

This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

## For Group 1:

Species of agent: nucleic acids, protein, saccharide, lipid, low molecular weight molecule, and a complex thereof.

Species of profile: gene expression, apoptosis signal, stress signal, localization of a molecule, fluorescence, phosphorescence, radioactivity, a combination thereof, a variation in cell morphology, promoter activity, an intermolecular interaction, and a cellular form.

Species of foreign agent: RNAi, a chemical not present in a biological body, a ligand for a receptor, temperature change, humidity change, electromagnetic wave, potential difference,

Application/Control Number: 10/562,469 Page 4

Art Unit: 1631

visible light, infrared light, ultraviolet light, X-rays, chemical substances, pressure, gravity changes, gas partial pressure, and osmotic pressure.

Species of number of biological agents: 2, 3, or 8.

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

The claims are deemed to correspond to the species listed above in the following manner:

Species of agent: 2, 6, 8.

Species of profile: 9-17, 21, 23-25, and 27.

Species of foreign agent: 19, 20, 22, and 75.

Species of number of biological agents: 35-37.

The following claim(s) are generic: 1, 3-5, 7, 18, 26, 28-34, 38-74, and 76-144

The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical

Application/Control Number: 10/562,469 Page 5

Art Unit: 1631

features for the following reasons: Each species is mutually exclusive and comprise different structures and/or functions.

2. Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John S. Brusca whose telephone number is 571 272-0714. The examiner can normally be reached on M-F 8:30 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Marjorie A. Moran can be reached on 571-272-0720. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
